## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 101***

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-13 are directed to non-statutory subject matter under 35 U.S.C. § 101.

Claims 1-13 recite abstract ideas or mathematical algorithms that fail to produce a physical transformation or a useful, concrete, and tangible result. The claim limitations are recitations of equations that are used in creating a formal model for vehicle suspension behavior. Choosing variables and formulating an equation is not patentable subject matter. There is no physical transformation from the "calculating" recited, nor is there any useful, concrete, or tangible result that is recited. The claims are an attempt to patent a mathematical formula.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Henry (US005434782A).

Art Unit: 3661

Per claims 1-13, Henry teaches a suspension state observer for a vehicle suspension system. The system uses a suspension state observer to model a suspension system of a vehicle according to an equation as explained beginning in column 7. Henry does not teach the specific equations recited by the applicant. However, to the extent that Henry teaches using a mathematical expression to model vehicle suspension behavior and uses the result to control a vehicle's suspension system, changes in the actual formula used to model the behavior would have been obvious to one of ordinary skill in the art at the time of the invention.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Butsuen et al. (US005269557A) teaches a suspension system for a vehicle that includes mathematically determining dampening force characteristics for the suspension system according to determined equations.
